

Taskflow CI/CD: End-to-End Pipeline Architecture (Lab 10)

Code → Commit → Build → Test → Stage → Deploy → Monitor

kind cluster · ns default
Deployments taskflow-blue / taskflow-green · Service taskflow (selector color) · postgres, 2x redis

kind-registry:5000
pods push kind-registry:5000; nodes pull localhost:5000 (containerd mirror)

SonarQube :9000
project taskflow-api · webhook → Jenkins for the Quality Gate

Prometheus :9090 + Grafana :3001
scrapes jenkins:8080/prometheus/ every 15 s · Health Gate reads jenkins_runs_*

Slack #taskflow-ci
post success / failure / aborted: job, #, branch, build URL

Jenkins credentials (IDs only in code)
registry-creds · sonar-token · kind-kubeconfig · cosign-key/-password · android-upload-keystore/-password · slack-bot-token

LEGEND

◆ **Gate:** build stops here if the check fails

Step (produces something, no pass/fail policy)

|| Parallel group: independent, read-only on the source

Failure path (automatic)

all develop main

Branches the stage runs on (when { branch })
